

## ENVIRONMENTAL POLICY

As ASAŞ, we continue our activities with a zero environmental accident target and a continuous improvement approach by investing in people, knowledge, and technology, with a sensitive approach towards our employees, society, and the environment. While carrying out production in the aluminum industry with high-quality standards, we consider minimizing our environmental impacts, using natural resources efficiently, combating climate change, and fulfilling our social responsibilities among our core values.

Accordingly, we fully comply with national legislation and the ISO 14001 Environmental Management System standard and adopt continuous development and improvement by benefiting from international standards and best practices in environmental, social, and governance areas. While improving our environmental practices, we adopt a transparent and inclusive management approach by considering the leading approaches of our stakeholders. Within this scope, we commit to:

- Conducting our activities in full compliance with applicable environmental legislation and other obligations, identifying our environmental impacts, carrying out risk and opportunity analyses, effectively managing all risks including those arising from climate change, and evaluating opportunities within technical and economic possibilities,
- Considering the environmental impacts of the technologies, raw materials, and auxiliary materials used and taking necessary preventive measures,
- Regularly calculating, monitoring, and reducing our greenhouse gas emissions through continuous improvement efforts aligned with reduction targets,
- Prioritizing climate change mitigation and adaptation activities in all our operations,
- Reducing our carbon and water footprint by ensuring efficient use of energy and water,
- Applying circular economy principles by using raw materials efficiently, minimizing waste generation, and increasing recycling rates,
- Maximizing the benefits of aluminum's recyclable structure throughout all processes from production to post-use within the product life cycle approach,
- Preventing environmental pollution arising from our products, services, and activities, protecting biodiversity, and supporting ecosystems,
- Organizing awareness-raising training and activities for our employees, suppliers, and where appropriate, other stakeholders,
- Setting measurable environmental objectives and targets, regularly monitoring their achievement, and transparently reporting our environmental performance,
- Continuously improving all our processes and enhancing our environmental management performance.
